## CONTROL:

The intelligence of the system is based on using 1 controller / logger for measuring and independent regulation of temperature and humidity, located on the front panel of the control situation with ergonomic switches and indicator lights.

- Parameter monitoring temperature or humidity reading to visualize real value and setpoint.
- Retention of work values entered in case of power failure.

- Optimization of work values by PID parameters in cold and heat.
- Configuring alarms warn when exceeding a safety limit value or for some reason there is a diversion of the conditions of control.
- Direct reading moisture%. H. R.
- Direct reading of temperature in ° C
